Figure S1. Relationships between (a) log PC1 of the distances between species and the log of their phylogenetic distances (10^6 years) and between (b) the log of the squared Mahalanobis distances between species and the log of their phylogenetic distances (10^6 years).

Post-print of: Sardans Galobart, Jordi, et al. "Foliar elemental composition of European forest tree species associated with evolutionary traits and present environmental and competitive conditions" in Global Ecology and Biogeography Vol. 24, Issue 2 (February 2015), p. 240-255.
